

Delaware Sea Level Rise Advisory Committee

Public Engagement Sessions

Be a part of
the process!

The Delaware Sea Level Rise (SLR) Advisory Committee has been working on assessing the potential future impacts of sea level rise on Delaware and they want **YOUR** feedback on how they are doing so far!

The SLR Advisory Committee is comprised of a representative from each State of Delaware cabinet-level department and representatives from municipal governments, business advocacy organizations and citizen advocacy organizations. Each representative to the Advisory Committee consults with their respective agencies and constituent groups regarding sea level rise issues and brings their concerns and needs to the table for discussion and action.

Join the Advisory Committee at one of several public engagement sessions across the state as they and DNREC scientists explain why sea level rise is happening, what its potential future effects could be, and their assessment of how it could impact our state's economy, society, public services, and natural resources in years to come. Your input will help guide the committee as they determine Delaware's potential vulnerabilities to sea level rise, and as they move forward on their next steps of developing recommendations for adapting our state to its impacts.

Join the Sea Level Rise Advisory Committee between 4:00 pm - 7:00 pm on these dates to listen to informative presentations, speak with subject matter experts, and to provide your comments and feedback as the Committee presents its work to date, including an assessment of the potential impacts of sea level rise on the state of Delaware:

- > **Weds. Nov. 9** - Middletown High School Auditorium
- > **Tues. Nov. 15** - Georgetown Public Library, 2nd Floor Public Mtng Rm
- > **Thurs. Nov. 17** - William Penn High School Auditorium
- > **Mon. Nov. 21** - Kent County Levy Court Complex, Room 221
- > **Tues. Nov. 29** - Cape Henlopen High School Auditorium

A brief presentation is scheduled for 4:30 pm, to be repeated at 6:00 pm.

Assessing Delaware's vulnerability to current and future inundation problems that may be exacerbated by sea level rise and developing a set of recommendations for state agencies, local governments, businesses and citizens to enable them to adapt programs, policies, business practices and make informed decisions about sea level rise.
